TITLE : PACKAGING MATERIAL FOR RETORT FOODS

ABSTRACT : PURPOSE: To prevent effectively the soiling of a packaging pouch by providing a protecting layer comprising polycarbonate layer, polypropylene layer or fluorine layer on the outer surface of a printing film layer through lamination, coating or the like.

CONSTITUTION: An unstretched polypropylene film layer 1 as a heat welded film layer, aluminum layer 2, and a polyethyleneterephthalate film layer 3 as a printing film layer are dry-laminated by disposing adhesive agent layers 4, 5 into respective layers thereof. A protecting layer comprising polycarbonate coating layer 6 is formed through coating the polycarbonate of a solvent type or emulsion type. Forming a packaging pouch using this material, even if curry adheres to the outer surface, it is the polycarbonate coating layer 6 or polycarbonate film layer 8 to which the curry adheres directly, and these layers can prevent the infiltration and diffusion of the turmeric contained in the curry almost completely.
